

Our initial screen of the platform has a small animation, our name and direct access to our social networks and forms.

Usually, before going to our social networks or blog, the user will have the experience of filling out the form as needed.

Already on the blog, our user, whether he is a rural producer or who applied for volunteering, will be able to browse and get information about the world of agriculture.

With the data offered by the Nasa platform, we will mainly help our producers to begin to understand through digital inclusion on related issues that directly interfere with planting and harvesting.

networks.

Presentation of the beginning of our social
